EDUCATION

University of Central Florida

Bachelor of Science in Computer Science

Aug 2022 - Aug 2025

Orlando, FL

EXPERIENCE

Full-Stack Developer, Contract

Apex Mitigation LLC

Feb 2026 - Present

Port Saint Lucie, FL

- Shipped a multipage Laravel and Blade marketing site for a water and fire damage restoration company, owning the full stack from PHP 8.4 backend to a custom responsive UI with no external framework dependencies.
- Built a Resend backed contact pipeline with server side validation that routes inbound client leads to ownership within seconds of submission, replacing a flow that previously lost lead inquiries entirely.
- Reduced initial page weight by roughly 50 percent through video compression, asset optimization, and Blade partial refactoring, holding mobile load under 2 seconds.

Full-Stack Developer, Contract

Coastal View Insurance Agency

Nov 2025 - Feb 2026

Palm Beach, FL

- Designed, built, and deployed a production insurance agency site serving live client traffic, using Node.js and Express on the backend with a fully responsive HTML and CSS frontend.
- Cut spam form submissions by 90 percent by layering rate limiting, server side validation, and request hardening on the public contact endpoint.
- Owned end to end deployment including DNS configuration, SSL/TLS provisioning, and HTTPS hardening, taking the site from local dev to publicly accessible production.

PROJECTS

Full-Stack Admin Dashboard | React, JavaScript, PostgreSQL

May 2026

- Modeled a normalized PostgreSQL schema across three relational tables to support 24/7 care coordination, including domain specific fields for service type, visit status, and multi day scheduling for overlapping caregivers and clients.
- Engineered real-time dashboard analytics including week-over-week trend tracking, daily visit counts, and a live cancellation banner, giving operations staff a one screen view of agency health.

3D Portfolio Environment | Three.js, React, Blender

Mar 2026

- Engineered an interactive 3D portfolio in Three.js and React combining real-time rendering with dynamic UI overlays for project navigation.
- Improved rendering performance by ~40 percent through baked lighting, geometry simplification, and texture driven materials, holding over 60 fps on mid range hardware.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML/CSS, SQL, Java, PHP

Frameworks: React, Node.js, Express, Three.js, Laravel and Blade

Databases: PostgreSQL, MySQL

Cloud and Infrastructure: AWS, Docker, Railway, Azure DevOps, DNS, SSL/TLS

Tools: Git, Jira, Postman, Figma, Blender
