

Hanna Pitino

(561) 800 - 9423 • hapitino@gmail.com • hannapitino.com • linkedin.com/in/hanna-pitino/

Full-stack developer specializing in React, TypeScript, and Node.js, with experience building and deploying production web applications, REST APIs, AI-powered features, and interactive 3D experiences. Improved page performance by 57% and reduced automated form submissions by 90% through frontend optimization and backend validation.

EDUCATION

University of Central Florida

B.S. Computer Science | Provost Scholar

Aug 2022 - Jul 2025

Orlando, FL

EXPERIENCE

Freelance Full-Stack Developer

Apex Mitigation LLC

Feb 2026 - Jun 2026

Port Saint Lucie, FL

- Designed and shipped a full-stack marketing website from the ground up. Client had no existing email system for lead capture; architected complete contact pipeline infrastructure using PHP/Laravel backend with Resend integration.
- Reduced mobile load time from 4.2s to 1.8s by compressing video, optimizing images, and refactoring frontend templates. Implemented server-side validation and error handling on responsive frontend.

Freelance Full-Stack Developer

Coastal View Insurance Agency

Nov 2025 - Feb 2026

Palm Beach, FL

- Built and deployed production web application (React frontend, Node.js/Express backend) handling live customer traffic. Implemented fully responsive UI with RESTful API for insurance inquiry submissions.
- Reduced malicious form submissions by 90% through multi-layer spam prevention: rate limiting, server-side validation, and honeypot fields. Maintained data integrity for legitimate customer inquiries.

Software Engineering Intern

Mission to Enceladus

Apr 2025 - Aug 2025

Brownsville, TX

- Optimized inventory data synchronization in real-time multiplayer game built in Unreal Engine 5. Identified and eliminated redundant client-server data transfers, reducing network payload by ~40% on inventory system calls.
- Improved player experience by reducing latency in inventory interactions during active multiplayer sessions. Debugged complex state synchronization across game engine, network layer, and UI systems in Agile environment.

PROJECTS

MyAnimeRec | AI-Powered Anime Recommendation Platform

React, TypeScript, Node.js, Express, PostgreSQL, Anthropic API

Jul 2026

- Engineered a full-stack app that generates personalized recommendations by combining a user's saved titles and ratings from PostgreSQL with free-text preferences, prompting the Claude API for structured JSON output that is validated, parsed, and persisted with full recommendation history.
- Integrated the AniList API for search and discovery and secured the backend with JWT authentication, bcrypt password hashing, and both per-request and daily rate limiting to protect the AI endpoint from abuse.

Roomfolio | 3D Interactive Portfolio

React, Three.js, Blender

Mar 2026

- Built real-time 3D environment from scratch using React and Three.js without starter templates or off-the-shelf 3D libraries. Implemented custom scene composition, dynamic UI overlays, and complete Blender asset pipeline.
- Optimized rendering for broad hardware compatibility through baked lighting, geometry simplification, and material compression. Maintained approximately 60 FPS on tested midrange desktop hardware.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, PHP, HTML/CSS

Frontend: React, Three.js, CSS Modules

Backend: Node.js, Express, Laravel, REST APIs

Databases: PostgreSQL, MySQL, Knex

Tools & Platforms: Git, Docker, Railway, Postman, Figma, Anthropic API, DNS/SSL, Blender, Unreal Engine 5
